## **1.1 Introduction**

In this PBL we have built an networking project using **cisco packet tracer**.

We have created a 'Hotel Management Networking' project which has three floors : First , Second and Third.

First floor comprising of departments (Reception, store and Logistics).

Second floor comprising of departments (Finance, HR and Sales/Marketing).

Third floor comprising of departments (IT and Admin).

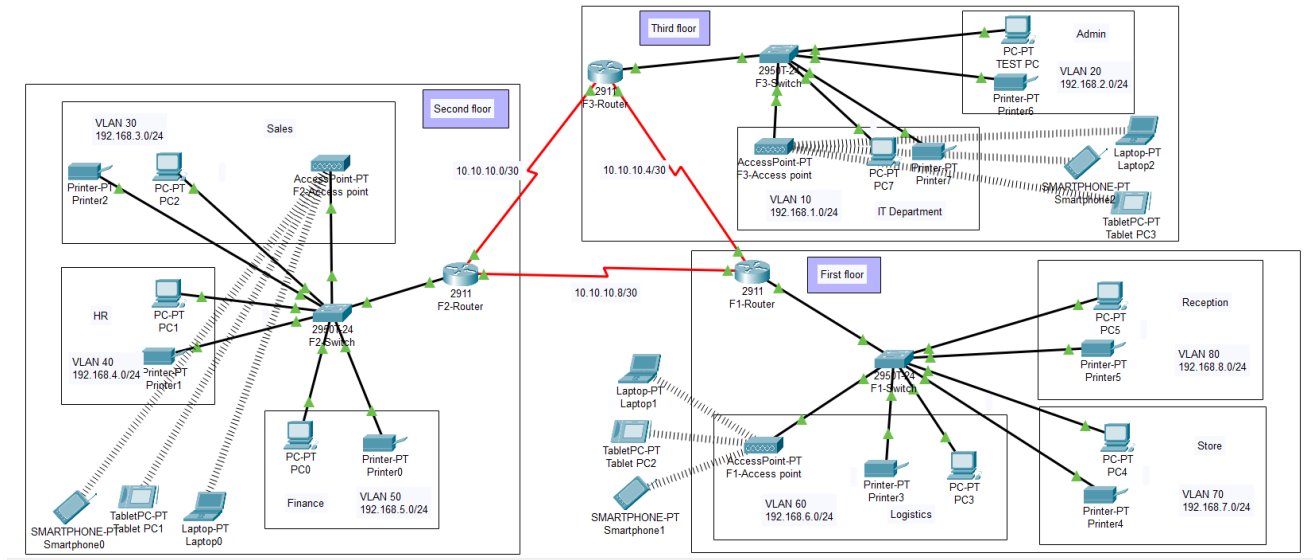

This is very primitive idea which will help us to understand the theoretical concepts and implement them practically.

This management system can be altered as per requirements and domain.

## **1.2 Requirements**

- Basic knowledge of cisco packet tracer.
- Understanding of types of connections and cables used and how to configure different components .
- Software like Cisco packet tracer.

## **1.3 Design & Problem Statement**

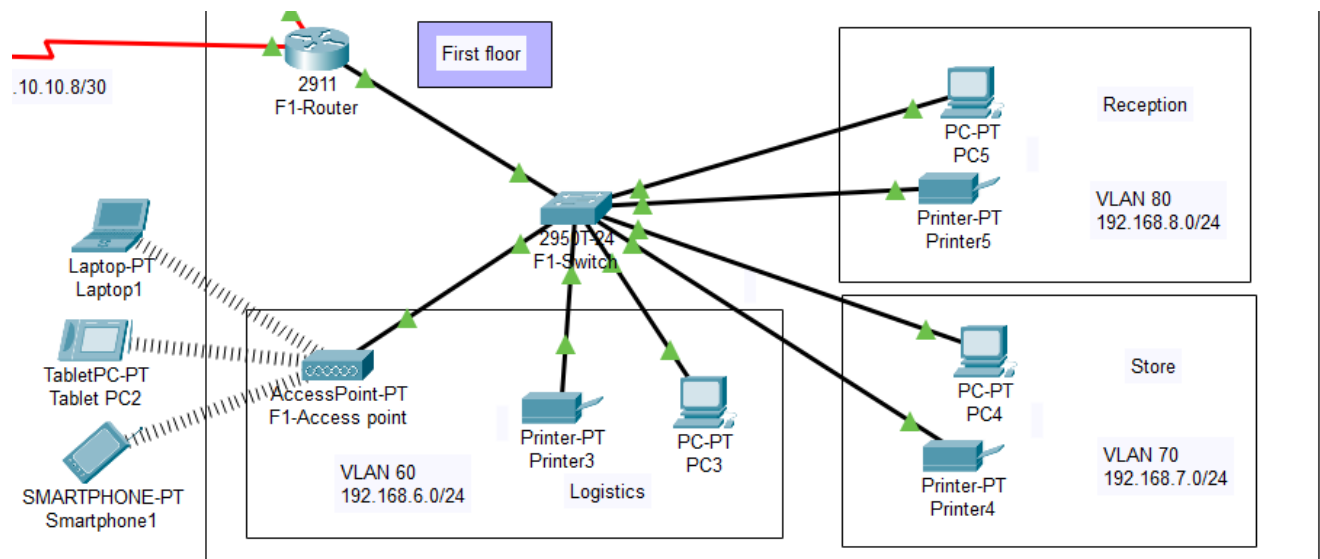

We have created a basic design as per the requirement, according to problem statement we needed to build an networking project for three floors

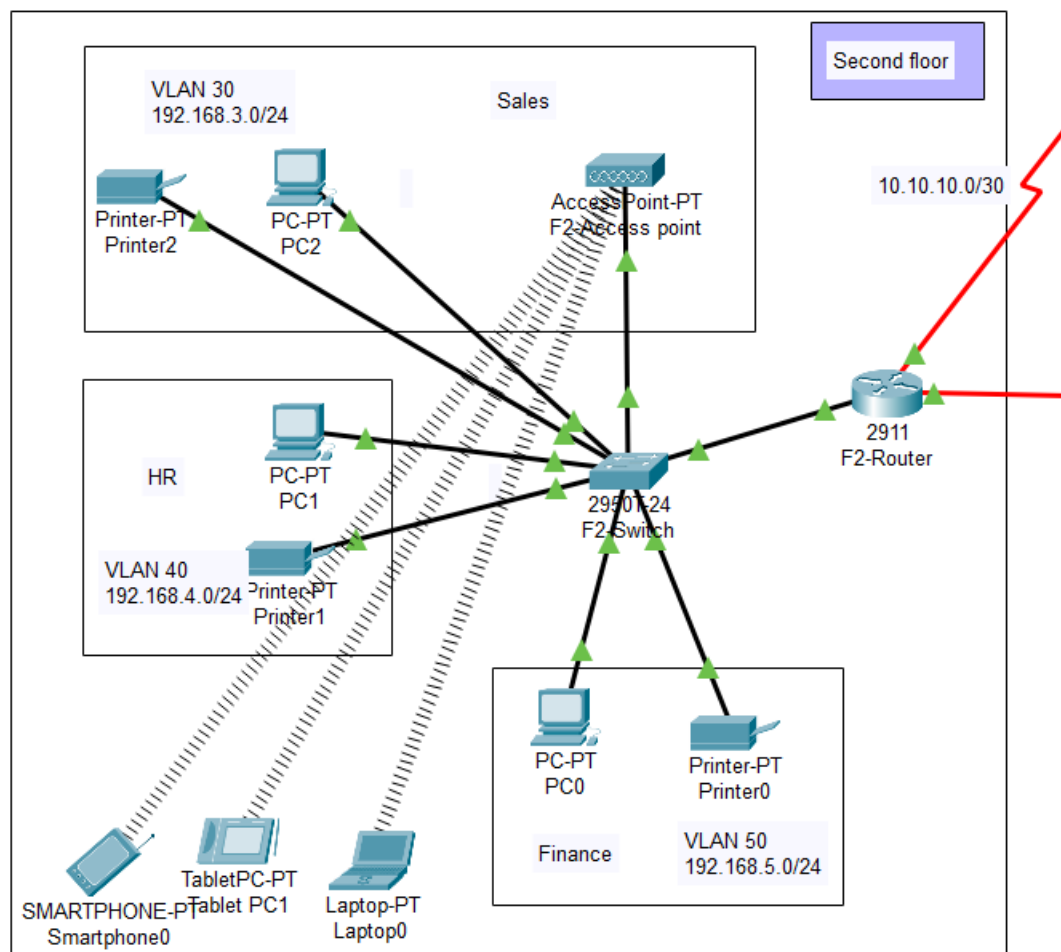

Problem Statement : To build an hotel management networking project using cisco packet tracer

## 1.4 Proposed Work

First Floor design:

## Second Floor design:

## Third Floor design:

**OSPF routing protocol:**

Open Shortest Path First (OSPF) is a link-state routing protocol that is used to find the best

path between the source and the destination router using its own Shortest Path First). It is a

network layer protocol which works on protocol number 89 and uses AD value 110. OSPF

uses multicast address 224.0.0.5 for normal communication and 224.0.0.6 for update to

designated router(DR)/Backup Designated Router (BDR).

**SSH:**

The Secure Shell Protocol is a cryptographic network protocol for operating network

services securely over an unsecured network. Its most notable applications are remote login

and command-line execution.

**Access Point:**

A Wireless Access Point (WAP) is a networking device that allows wireless-capable

devices to connect to a wired network. Instead of using wires and cables to connect every

computer or device in the network, installing WAPs is a more convenient, more secure, and

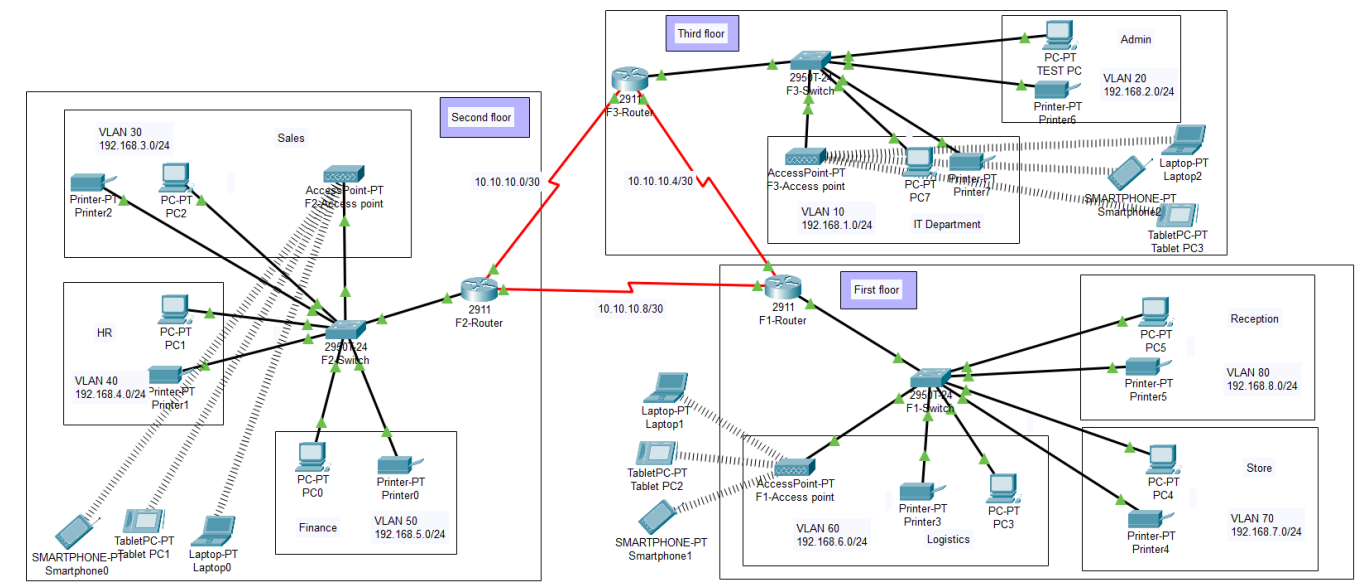

cost-efficient alternative.

## Crypto keys:

A cryptographic key is a string of data that is used to lock or unlock cryptographic functions, including authentication, authorization and encryption. Cryptographic keys are

grouped into cryptographic key types according to the functions they perform.

## Final design:

## 2.1 Approach

The approach was simple where we have to design every floor and define what kind of cables and connections we are going to use and finally configure all the routers, switches and devices to function accordingly.

1. First we have placed three routers connecting each floor (all placed in the server room in IT department).
2. All routers were connected to each other using serial DCE cables.
3. The network between the routers should be 10.10.10.0/30, 10.10.10.4/30, 10.10.10.8/30
4. Each floor is expected to have one switch (placed in the respective floor).
5. Each floor have WIFI networks connected to laptops , Tablets and phones.
6. Every department on each floor has a printer.
7. Each department have different VLAN with the following details:

### **1st Floor,**

Reception- VLAN 80, Network of 192.168.8.0/24

Store- VLAN 70, Network of 192.168.7.0/24

Logistics- VLAN 60, Network of 192.168.6.0/24

### **2nd Floor,**

Finance- VLAN 50, Network of 192.168.5.0/24

HR- VLAN 40, Network of 192.168.4.0/24

Sales- VLAN 30, Network of 192.168.3.0/24

### **3rd Floor,**

Admin- VLAN 20, Network of 192.168.2.0/24

## IT- VLAN 10, Network of 192.168.1.0/24

8. Used OSPF as the routing protocol to advertise routes.
9. All devices in the network obtain their IP address dynamically with their respective router configured as the DHCP server.
10. All the devices in the network are expected to communicate with each other.
11. We have configured SSH in all the routers for remote login.
12. In IT department, we have added a PC called Test-PC to port fa0/2 and use it to test remote login.
13. Finally we have configured port security to IT-dept switch to allow only Test-PC to access port fa0/2
- 14.

### 2.2 Platform & Technology

Platform used is Cisco Packet Tracer.

### 2.3 Outcomes

#### 1<sup>st</sup> floor router configuration:

```
%LINK-5-CHANGED: Interface Serial0/2/0, changed state to up
%LINK-5-CHANGED: Interface Serial0/2/1, changed state to up

%LINEPROTO-5-UPDOWN: Line protocol on Interface GigabitEthernet0/0, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface GigabitEthernet0/0.60, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface GigabitEthernet0/0.70, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface GigabitEthernet0/0.80, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial0/2/0, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial0/2/1, changed state to up

00:00:10: %OSPF-5-ADJCHG: Process 10, Nbr 192.168.2.1 on Serial0/2/0 from LOADING to FULL, Loading Done

00:00:10: %OSPF-5-ADJCHG: Process 10, Nbr 192.168.5.1 on Serial0/2/1 from LOADING to FULL, Loading Done
%DHCPCD-4-PING_CONFLICT: DHCP address conflict: server pinged 192.168.8.1.
%DHCPCD 4 PING_CONFLICT: DHCP address conflict: server pinged 192.168.7.1.
```

## Floor 1 switch :

```
%LINK-5-CHANGED: Interface FastEthernet0/1, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/1, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/2, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/2, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/4, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/4, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/5, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/5, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/6, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/6, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/7, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/7, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/8, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/8, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/3, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/3, changed state to up
```

## 2<sup>nd</sup> floor router configuration:

```
%LINK-5-CHANGED: Interface Serial0/2/0, changed state to up
%LINK-5-CHANGED: Interface Serial0/2/1, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface GigabitEthernet0/0, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface GigabitEthernet0/0.30, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface GigabitEthernet0/0.40, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface GigabitEthernet0/0.50, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial0/2/1, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial0/2/0, changed state to up
00:00:10: %OSPF-5-ADJCHG: Process 10, Nbr 192.168.2.1 on Serial0/2/0 from LOADING to FULL, Loading Done
00:00:10: %OSPF-5-ADJCHG: Process 10, Nbr 192.168.8.1 on Serial0/2/1 from LOADING to FULL, Loading Done
%DHCPD-4-PING_CONFLICT: DHCP address conflict: server pinged 192.168.5.1.
```

## Floor 2 switch :

```
%LINK-5-CHANGED: Interface FastEthernet0/1, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/1, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/2, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/2, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/3, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/3, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/4, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/4, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/5, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/5, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/6, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/6, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/7, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/7, changed state to up
%LINK-5-CHANGED: Interface FastEthernet0/8, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface FastEthernet0/8, changed state to up
```

Packet sent from PC-2 on second floor to Laptop 1 on first floor and Tablet on Third floor

Fire	Last Status	Source	Destination	Type	Color	Time(sec)	Periodic	Num	Edit	Delete
	Successful	PC2	PC0	ICMP		0.000	N	0	(edit)	(delete)
	Successful	PC2	Laptop1	ICMP		0.000	N	1	(edit)	(delete)
	Successful	PC2	Tablet PC3	ICMP		0.000	N	2	(edit)	(delete)

PC2

Physical Config Desktop Programming Attributes

Command Prompt

```
Cisco Packet Tracer PC Command Line 1.0
C:\>ping 10.10.10.8

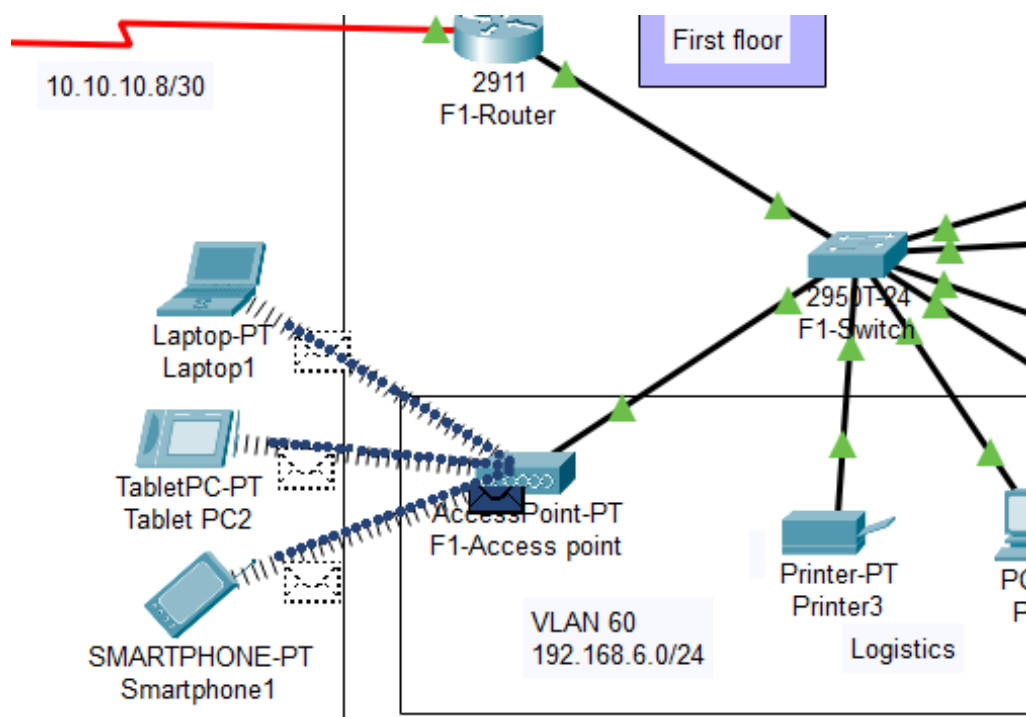

Pinging 10.10.10.8 with 32 bytes of data:

Reply from 192.168.3.1: bytes=32 time<1ms TTL=255
Reply from 192.168.3.1: bytes=32 time<1ms TTL=255
Reply from 192.168.3.1: bytes=32 time<1ms TTL=255
Reply from 192.168.3.1: bytes=32 time<1ms TTL=255

Ping statistics for 10.10.10.8:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

C:\>
```

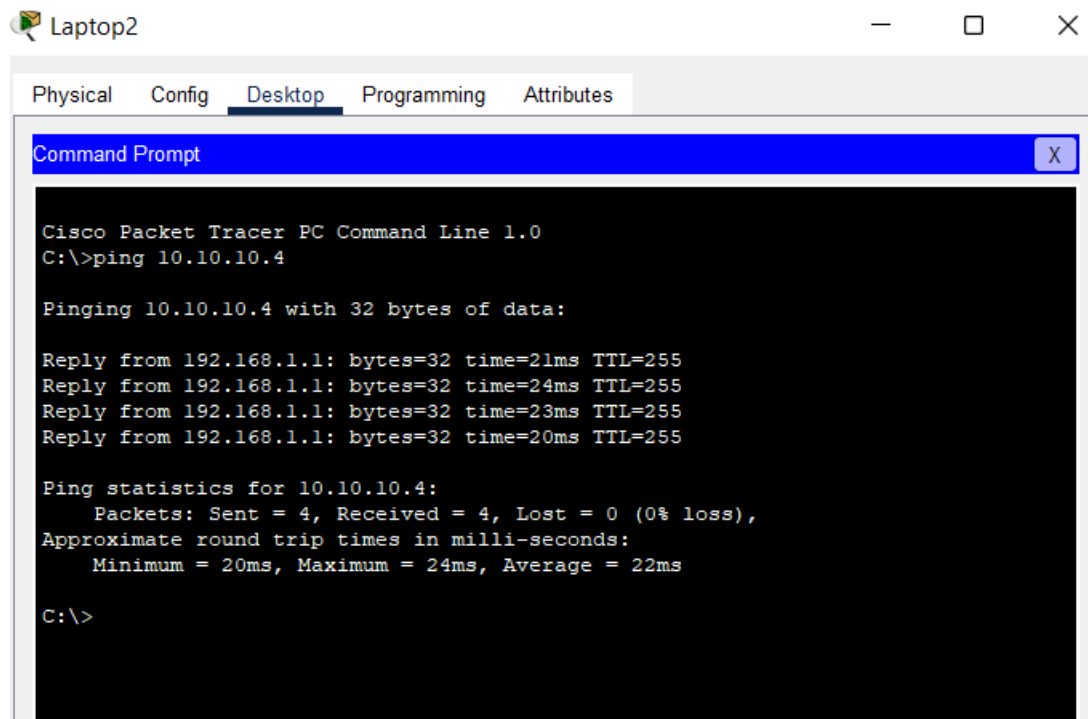

## Receiving Packets

Packets sent from TEST PC (third floor) to Printer 1 (Second floor)

Fire	Last Status	Source	Destination	Type	Color	Time(sec)	Periodic	Num	Edit	Delete
	Successful	TEST...	Printer1	ICMP		0.000	N	0	(edit)	(delete)
	Successful	Laptop2	Printer1	ICMP		0.000	N	1	(edit)	(delete)
	Successful	Laptop2	Laptop1	ICMP		0.000	N	2	(edit)	(delete)

Packets sent from Laptop 2 (third floor) to Printer 1 (Second floor)

The screenshot shows a window titled "Laptop2" with tabs for Physical, Config, Desktop, Programming, and Attributes. The Desktop tab is active, displaying a Command Prompt window. The Command Prompt shows the output of a ping command to 10.10.10.4, indicating successful connectivity with 0% loss and round trip times between 20ms and 24ms.

```
Cisco Packet Tracer PC Command Line 1.0
C:\>ping 10.10.10.4

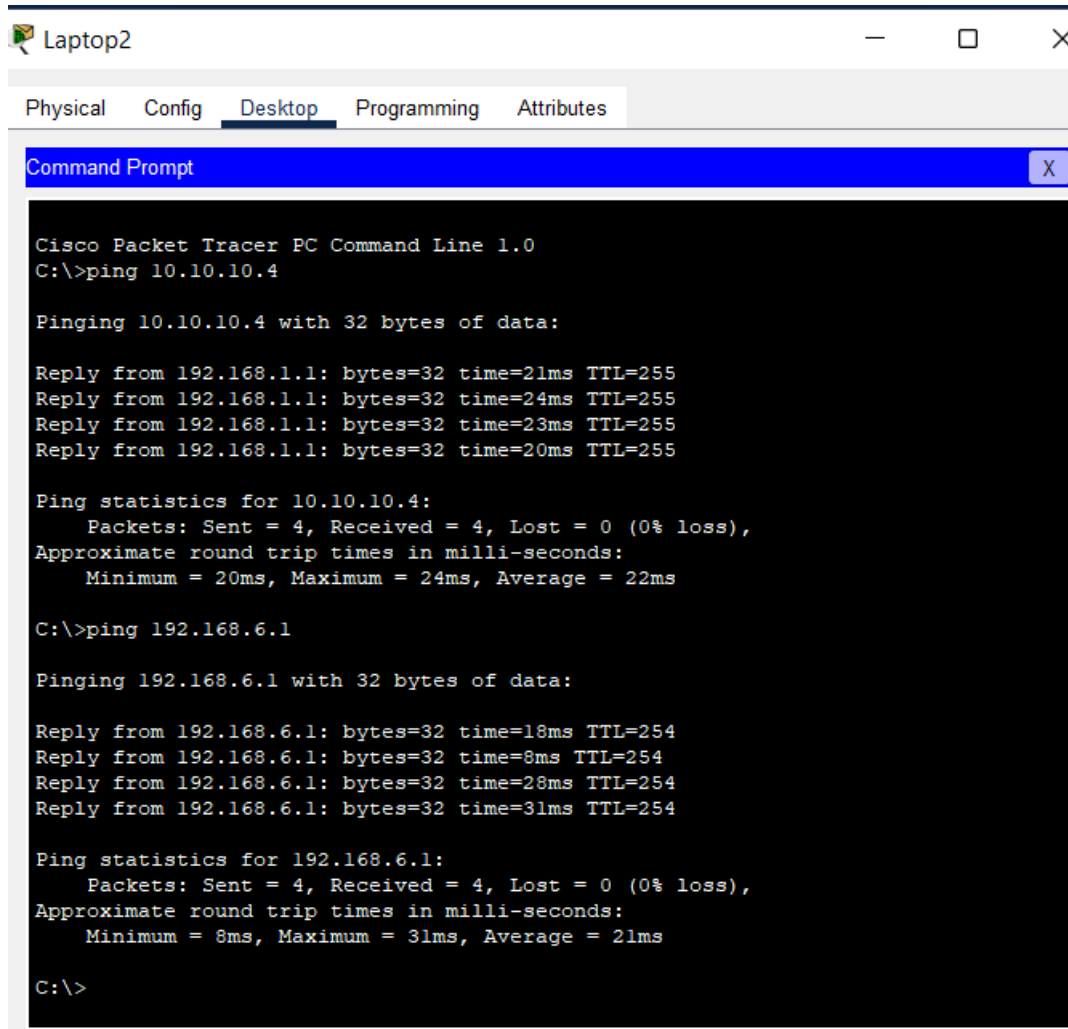

Pinging 10.10.10.4 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time=21ms TTL=255
Reply from 192.168.1.1: bytes=32 time=24ms TTL=255
Reply from 192.168.1.1: bytes=32 time=23ms TTL=255
Reply from 192.168.1.1: bytes=32 time=20ms TTL=255

Ping statistics for 10.10.10.4:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 20ms, Maximum = 24ms, Average = 22ms

C:\>
```

Packets sent from Laptop 2 (Third floor) to Laptop 1 (Second floor)

The screenshot shows a window titled "Laptop2" with tabs for "Physical", "Config", "Desktop", "Programming", and "Attributes". The "Desktop" tab is active, displaying a "Command Prompt" window. The command prompt shows the output of two ping commands. The first command is "ping 10.10.10.4", which results in four successful replies from 192.168.1.1 with varying round trip times (21ms, 24ms, 23ms, 20ms) and a TTL of 255. The second command is "ping 192.168.6.1", which also results in four successful replies from 192.168.6.1 with round trip times of 18ms, 8ms, 28ms, and 31ms, and a TTL of 254. Both tests show 0% packet loss.

```
Cisco Packet Tracer PC Command Line 1.0
C:\>ping 10.10.10.4

Pinging 10.10.10.4 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time=21ms TTL=255
Reply from 192.168.1.1: bytes=32 time=24ms TTL=255
Reply from 192.168.1.1: bytes=32 time=23ms TTL=255
Reply from 192.168.1.1: bytes=32 time=20ms TTL=255

Ping statistics for 10.10.10.4:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 20ms, Maximum = 24ms, Average = 22ms

C:\>ping 192.168.6.1

Pinging 192.168.6.1 with 32 bytes of data:

Reply from 192.168.6.1: bytes=32 time=18ms TTL=254
Reply from 192.168.6.1: bytes=32 time=8ms TTL=254
Reply from 192.168.6.1: bytes=32 time=28ms TTL=254
Reply from 192.168.6.1: bytes=32 time=31ms TTL=254

Ping statistics for 192.168.6.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 8ms, Maximum = 31ms, Average = 21ms

C:\>

Remote login through Test PC:

## 2.4 Future Work

This networking project can be improved by adding a separate server room and adding more PC's and Laptops as and when required accordingly .Also to manage the load we can add a separate test PC on each floor.

### **Conclusion:**

- Thus we have successfully built an hotel management networking project using cisco packet tracer.
- We have made use of serial DCE cable to interconnect all the routers which are located at different floors.
- Also we have used OSPF as the routing protocol to advertise routers which is basically a link-state routing protocols for IP networks.
- To test remote login we have placed an PC named test PC in the IT department.
